Breakdown of Reported GHG Emissions (MMT CO2e) from Stationary Sources by Industry Type - 2010*

Power Plants, 2,324 (72.3%)
Government & Commercial, 15 (0.5%)
Pulp & Paper, 46 (1.4%)
Minerals, 96 (3.0%)
Metals, 99 (3.1%)
Landfills, 117 (3.6%)
Other Industrial, 159 (4.9%)
Chemicals, 175 (5.4%)
Refineries, 183 (5.7%)

This figure shows total reported GHG emissions by industry type reported to the Greenhouse Gas Reporting Program (GHGRP) in 2010. Note this figure does not represent total U.S. emissions, and percentages only imply the percent of total emissions reported by facilities in the GHGRP. The GHGRP covers the vast majority of U.S. emissions from the electric power and industrial sectors.

*Emissions from the transportation, residential, commercial and agricultural sectors are not reflected in these totals.
All data is as reported by facilities on 12/16/11.

This figure shows the number of facilities in each state that reported GHG emissions in 2010. The Greenhouse Gas Reporting Program generally covers those facilities that emit more than 25,000 metric tons of carbon dioxide equivalent per year. Entities only reporting GHG quantities associated with products supplied are not included in this graphic.
Total Reported GHG Emissions (MMT CO2e) by Power Plants and Refineries by State - 2010

*All data is as reported by facilities on 12/16/11.*

*These states have less than 0.5 MMT CO2e emissions from power plants and refineries.*

Puerto Rico, Guam and the Virgin Islands: 22

This figure shows total GHG emissions reported by power plants and refineries in each state in 2010 in million metric tons of carbon dioxide equivalent (CO2e). All U.S. refineries are required to report. All power plants who emit above above 25,000 metric tons of CO2e and select smaller power plants are required to report.
